

Location Tracker Semi-Structured Interview Protocol

February 2026

1 Introduction

The purpose of a semi-structured interview is to gather additional information from the user that may not have been captured by geolocation or diary entries. This information will be used to supplement the study data and to investigate any relationship between participation (as measured by questionnaire) and the geolocation based summary measures.

The session will provide an opportunity to discuss the participant's experience of the app, their perception of participating in the study and to reiterate how their data will be used.

1.1 Study Feedback

The participant will be asked to provide feedback on the study, including:

- In your own words, what was your overall experience of participating in the study? You may include positive and negative aspects of the study, as well as any suggestions for improvement in your answer.
- What was your experience of having the types of locations you visited during this period recorded during this study?
 - How do you feel about it now?
 - Do you have any other comments or questions about the data collected during this study, or what is done with it?
- What they think of the data they have provided and how it will be used.
- What they think of the study overall and whether they would recommend it to others.

2 Content

The semi-structured interview is an opportunity to ask participants questions that align with one, or more, of the questionnaire items from the following measures of participation:

- **WHODAS 2.0**
- **YADAPS**
- **USER-Participation**
- **SF36-V2**
- **PM-PAC**
- **GCPLA**
